***Response to Amendment***

1. The request for reconsideration filed on 5/10/02 has been entered. Claims 1-14 are still pending.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kanno (US 5,602,567) in view of Lundberg (US 5,738,527).

As per claims 1, 2, 4, and 5, Kanno teaches a display apparatus comprising a monitor or a display screen 2 displaying data sent from a main apparatus, a display control 14, a memory RAM 12 or EPROM 11 wherein said monitor or display screen, said memory unit, and said display control unit are contained in a frame that is independent from a frame containing the main apparatus (see fig. 1). Kanno does not teach a screen protecting data in the memory but Lundberg teaches a screensaver program that can be stored in the memory system of Kanno (see abstract).

It would have been obvious to one of ordinary skill in the art, at the time of the invention, to utilize the screensaver program software taught by Lundberg into the system of Kanno because it would allow a user to create his or her own custom database of units of information for display (see col. 1, lines 40-43).

Art Unit: 2674

As per claim 3, Kanno teaches a main apparatus (CPU) 1 which sends a signal from a communication between the computer and the display monitor (see col. 4, lines 43-45).

As per claims 6 and 7, Kanno teaches a display apparatus comprising a monitor (display screen) 2 displaying data sent from a main apparatus, a display control 14, a memory RAM 12 or EPROM 11 wherein said monitor or display screen, said memory unit, and said display control unit are contained in a frame that is independent from a frame containing the main apparatus (see fig. 1). Kanno does not teach a screen protecting data in the memory but Lundberg teaches a screensaver program that can be stored in the memory system of Kanno (see abstract). The combination of Kanno and Lundberg would certainly trigger the screen saver automatically is displayed on the display screen if there is no activity from a user or no signal from the CPU to the display.

It would have been obvious to one of ordinary skill in the art, at the time of the invention, to utilize the screensaver program software taught by Lundberg into the system of Kanno because it would allow a user to create his or her own custom database of units of information for display (see col. 1, lines 40-43).

As per claim 8, Kanno teaches a main apparatus (CPU) 1 which sends a signal from a communication between the computer and the display monitor (see col. 4, lines 43-45).

As per claim 9, see rejection of claims 6 and 7.

As per claim 10, see rejection of claims 1 and 4.

As per claim 11, see rejection of claim 5.

As per claims 12 and 13, see rejection of claim 2.

As per claim 14, see rejection of claim 4.

***Response to Arguments***

4. Applicant's arguments filed 5/10/02 have been fully considered but they are not persuasive.

Applicant argues that there is no suggestion in either Kanno or Lundberg that a screen saver program be stored in the memory of a display. Contrary to applicant's arguments, it is not necessary that the references actually suggest, expressly or in so many words, the changes or improvements that applicant has made. The test for combining references is what the references as a whole would have suggested to one of ordinary skill in the art. In re sheckler, 168 USPQ 716 (CCPA 1971); In re McLaughlin 170 USPQ 209 (CCPA 1971); In re Young 159 USPQ 725 (CCPA 1968).

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
